

C.Scope Metal Detectors

C.SCOPE

CS990XD a professional start in metal detecting

Nobody understands the world of treasure hunting like C.Scope. We've been making high performance metal detectors in Britain for more than 25 years. In that time we have met literally thousands of successful treasure hunters and they have told us about all the features they like to see in a detector. A lot of detectorists have found that it is the meticulous approach which gets results. The CS990XD and CS1220R non-motion detectors have been developed for this style of detecting so that anyone can be detecting like a pro with very little practice.

OVERVIEW

The CS990XD can be adjusted to achieve maximum performance on all ground types. There's meter and audio discrimination for effective rejection of rubbish metal signals.

NON MOTION operating system allows any sweep speed to be adopted and easy identification of the precise target position. The CS990XD is a neat combination of professional features on a budget priced machine.

TECHNICAL

- SINGLE FREQUENCY TECHNOLOGY 17kHz
- NON-MOTION search technique Push-button retune
- Manual ground adjustments with pre-set
- Audio+meter discrimination system
- 20cm ISOCON waterproof searchhead
- Counterbalanced battery box/armrest
- Adjustable stem
- 8 x AA battery power
- Socket for (optional) headphones.

**CS990XD.
TOP RANGE FEATURES -
BUDGET LEVEL PRICE**

Available from:
**C.SCOPE DIRECT
& C.SCOPE STOCKISTS**
£199
inc vat

REASONS TO CHOOSE THE CS990XD.

If you like to get into the science of metal detecting from the word go the CS990XD puts you in the driving seat. All the elements of detector operation are there to adjust for maximum performance.

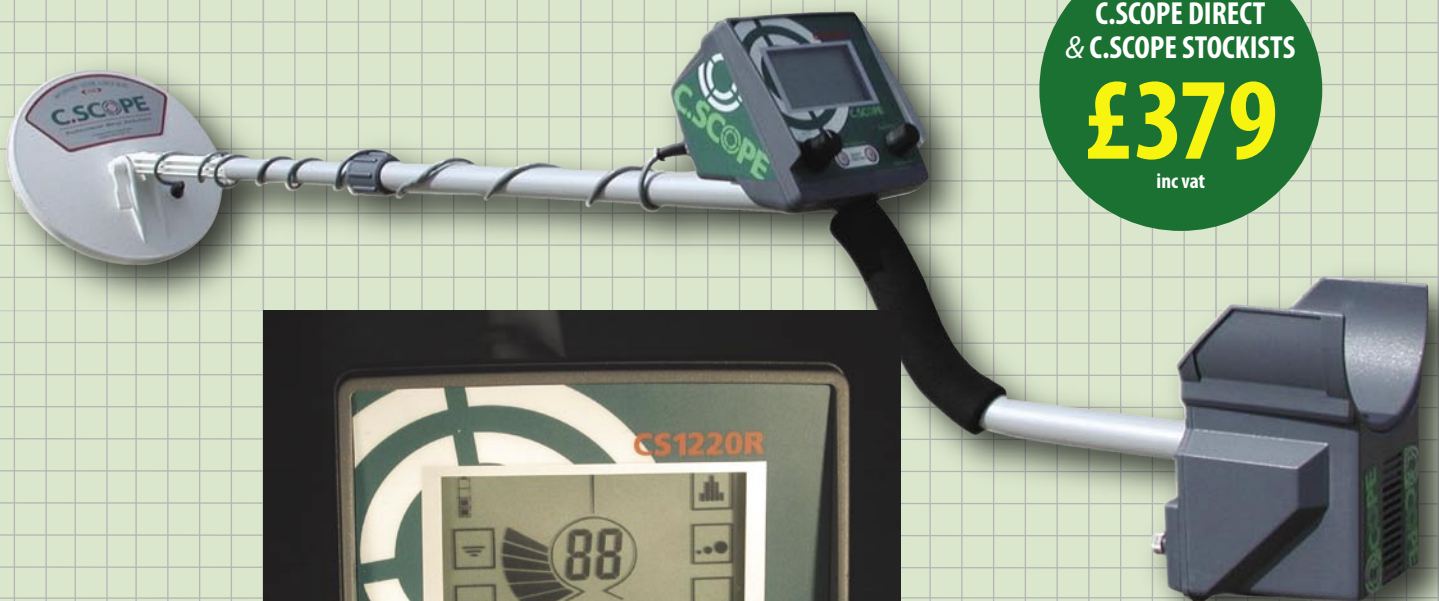

Amateur and professional archaeologists will go for the precision of the CS990XD concept. Sifting carefully through sand or soil in search of the smallest targets is just the job the CS990XD was designed for.

If you want professional features at a budget price, the CS990XD is for you.

CS1220R the power of the computer

Available from:
C.SCOPE DIRECT
 & **C.SCOPE STOCKISTS**
£379
 inc vat

TECHNICAL

- SINGLE FREQUENCY TECHNOLOGY 17kHz
- Computer controlled 3-Way operating system
- NON-MOTION search technique
- Push-button retune
- HOT CONTROL ground balance
- Audio and meter discrimination with pre-set
- 20cm ISOCON waterproof search-head. (optional 15cm)
- Counterbalanced battery box/armrest
- Adjustable stem
- 8 x AA battery power
- Socket for (optional) headphones.

OVERVIEW

The CS1220R has been designed for professional treasure hunters. We studied the ways that successful detectorists used their machines and we incorporated all that we learned into the software of the CS1220R. The result is a 3-Mode operating system reflecting distinctly different ways of working with the CS1220R.

G/D MODE is a 2 channel system which allows you to switch rapidly between a MAX DEPTH 'normal' search pattern and TARGET ID to check if the target is worth digging.

METER SEARCH MODE operates as if the 'eyes and ears' of the detector are extended ready to deliver maximum information about the target underground. The audio channel of the detector operates in maximum depth while the screen provides information about the desirability of the object.

METER AND AUDIO MODE offers maximum target information contained in the audio signal and on-screen. The intelligent CS1220 R allocates higher pitched sounds to valuable objects and lower pitched sounds to undesirable targets. You listen for the right sound which means treasure underfoot.

THE REASON WHY COMMITTED 1220 USERS WOULDN'T SWAP FOR ANY OTHER DETECTOR LIES IN THE WAY THE MACHINE OPERATES AS AN EXTENSION OF THE SENSES.

REASONS TO CHOOSE THE CS1220R

With the CS1220R you buy into the experience of the hobby's top detector users. The CS1220R is the fast track to successful detecting.

If the methodical approach is the one that suits your temperament. If that magic 1220 target ID feature appeals (great on typical farmland sites infested with iron rubbish), then the CS1220R has to be the very best choice for the professional detectorist.

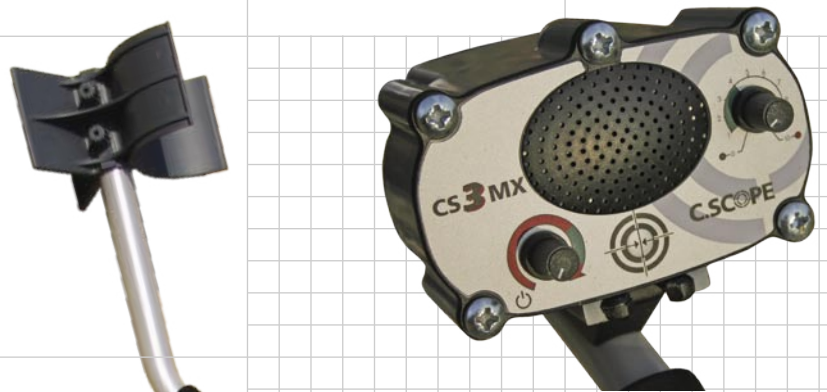

CS3MX all-new, high performance motion detector

OVERVIEW

The CS3MX has been developed with simplicity of operation as the number 1 priority. The CS3MX is a 'switch-on-and-go' design with automatic tuning activated by the motion of the search-head passing over the ground. The CS3MX offers superb depth of detection and a variable discrimination setting which eliminates the signals from undesirable targets. The highly responsive CS3MX provides a sharp target signal even at fast sweep speeds.

TECHNICAL

- 17kHz MOTION search system
- Automatic retune. Switch on and go
- Push button target pin-point
- All metal super depth mode
- Variable rubbish rejection level
- 20cm ISOCON waterproof search-head
- Belt mountable control box
- Adjustable stem
- 8 x AA battery power
- Socket for (optional) headphones.

REASONS TO CHOOSE THE CS3MX

There's beauty in simplicity. If the mere mention of a learning curve fills you full of dread. If you're allergic to operating manuals. If you just want to get out and enjoy the greatest hobby on earth in as much time as it takes you to fit the batteries, choose the CS3MX.

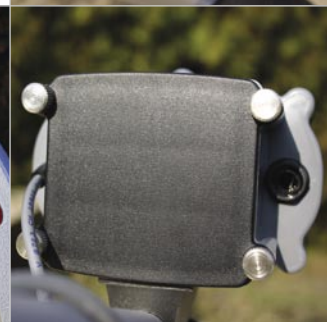

The CS3MX offers professional levels of detection depth plus a discrimination system which simply eliminates the signals from undesirable targets.

If fatigue on the arm is a matter of concern to you, consider the extremely light weight of this detector.

If you have a lot of ground to cover and you like to move fast, the highly responsive CS3MX will suit your style of detecting right down to the ground!

Performance, simplicity, and price are the reasons to choose the excellent CS3MX.

POWER DETECTING WAS NEVER THIS EASY

CS Newforce R1 computer aided search system

OVERVIEW

The NEWFORCE R1 harnesses the power of the micro-computer to check ground conditions, optimise depth and provide target identification data all in a user-friendly lightweight design.

The computer can handle all the adjustments for the novice or the professional can select 'menu options' to tweak performance exactly to his personal preference.

A unique 'RADAR SIMULATION' feature puts the raw signal onto the screen for visual analysis. The smart target analysis software inside the R1 can even sort targets into wanted and unwanted categories and advise the operator on whether to dig. Two search-heads are supplied as standard, a deep seeking 25cm diameter head for general purpose detecting and a 15cm head for working around obstacles such as stubble or undergrowth. The NEWFORCE R1 does it all - the ultimate treasure finding instrument.

TECHNICAL

- Twin Microprocessor control system
- 3 Operating frequencies 6 - 7 kHz
- Liquid Crystal Display with backlight
- RADAR SIMULATION feature
- High Speed target analyser with 'LEARN'
- Target pin-point
- Audio discrimination
- User defined programs
- 25cm and 15cm search-heads standard
- Independent volume control
- Counterbalanced battery box/armrest
- Adjustable stem
- 8 x AA battery power
- Socket for (optional) headphones

REASONS TO CHOOSE THE NEWFORCE R1

If you want the best metal detector that money can buy, it doesn't matter if you are a beginner or a professional, the NEWFORCE R1 is a superb choice.

Set the controls to 'automatic' and the only thing you need to adjust is the volume. Change over to 'manual' and every aspect of R1 operation comes under your control in a menu system which is so easy to understand. In effect, the R1 grows with you as you develop your detecting skill.

Whatever your detecting style and on any type of terrain the NEWFORCE R1 is the detector to work with.

CS4PI all-terrain all-metal search

OVERVIEW

The CS4PI is an extremely powerful metal detector designed for use on all types of ground but excels in the one situation where most other detectors struggle, on the beach. The 'switch-on-and-go' principle makes the CS4PI a joy to use for anyone, even if they've never used a detector before. Just compare that with some of our competitors whose machines require all sorts of complicated adjustments to work on wet salt beaches. The CS4PI has a distinctive cleverly designed control box which can quickly be detached from the stem and belt mounted around the body. The CS4PI is a high performance treasure finding tool which can perform its specialised functions better than some competitors machines at five times the price.

TECHNICAL

- Variable Frequency MOTION search system
- 1k - 4.2k pps frequency control
- Audio response with LED
- Automatic retune 'switch on and go'
- All metal super depth, optimised for beach operation
- 25cm open centre waterproof search head
- Belt mountable control box
- Adjustable stem
- 8 x AA battery power
- Socket for (optional) headphones.

REASONS TO CHOOSE THE CS4PI

If you want to be the one to recover a share of the tons of valuables lost on beaches each year, the CS4PI has got to form part of your detecting kit.

If you want maximum depth on all metal objects, maybe you're into searching for militaria on old battlefield sites, the CS4PI is a perfect detector to take along.

The CS4PI is an ever ready back-up to whatever detector you are regularly using now. The thing is, we think you'll end up preferring the back-up detector!

THERE'S NO COMPROMISE WITH CS4PI PERFORMANCE. IT'S THE RIGHT TOOL FOR THE JOB.

CS9000HPX the hoard locator

OVERVIEW

The hunt for deep treasure requires a radically different approach, that's the CS9000HPX. To probe deep into the ground requires a search coil array which cannot be contained within a conventional disc shaped search-head.

By positioning the transmit and receive coils at either end of a mounting bar it becomes possible to locate the tiny signals generated by large pieces of metal deep down in the

ground, as much as 2 or even 3 metres. That's way in excess of the best depth achievable by any conventional metal detector. Signals from small metal objects are simply not detected. If you get a signal with the CS9000HPX, you know you're onto something big.

Available from:
**C.SCOPE DIRECT
& C.SCOPE STOCKISTS**

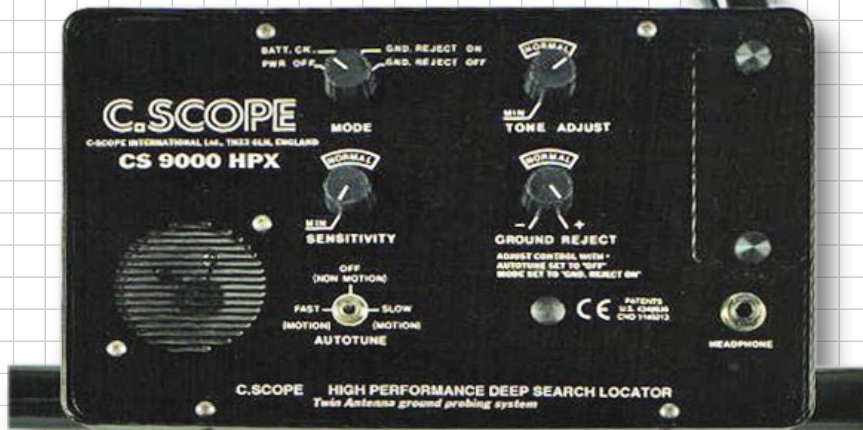

£599

inc vat

TECHNICAL

- MOTION / NON-MOTION search system
- Automatic and push-button retune
- Twin antennae array (collapsible for transport)
- Adjustable ground point
- 6 x AA battery power
- Socket for (optional) headphones.

**NO CONVENTIONAL DETECTOR CAN GET ANYWHERE
NEAR THE DEPTH OF THE CS9000HPX**

REASONS TO CHOOSE THE CS9000HPX

If you are looking for deep treasure you need a specialised locator. If you are following up some clues which indicate the possibility of big treasure, the CS9000HPX can probe far deeper than any ordinary detector. A typical clue might be a trail of coins across a field which could have been dragged by a plough from a deeply buried pot. Or you might find some artefacts and note some terrain features which could indicate an ancient underground burial chamber. (The treasure hunters' Code of Conduct - inform museum

authorities about any finds which may have archaeological significance).

On battlefield sites the CS9000HPX comes into its own. Cannonballs, swords, muskets, helmets are all easy targets for the CS9000HPX.

The CS9000HPX has been used in the recovery of crashed warplanes at 5 metres. You can't use the CS9000HPX for everyday detecting situations because of its poor sensitivity to small objects.

The CS9000HPX is a valuable addition to the equipment of the enthusiast or may be shared within a group. Get ready for some serious excavations!

C.SCOPE

Every C.SCOPE metal detector is designed to offer the highest possible performance in its class and superb value for money.

No hype. No false claims. Just excellent metal detecting instruments for people who are serious about their hobby.

C.SCOPE ISO9001 Quality. CE. Environmentally friendly manufacture. Conforms with EU legislation on lead free manufacture.
